

FACULTY RESEARCHERS

Can your research save or enhance **HUMAN LIFE?**

Attend this faculty information session to hear about
NEW FUNDING OPPORTUNITIES arising at the
Presbyterian Health Foundation!

Wednesday, March 2
10:00 am
Case Study 1
408 Student Union

The Presbyterian Health Foundation (PHF) is interested in funding opportunities that can make a difference in the quality of life and health care, today and tomorrow. PHF research grants in biomedical science are the most common type of funding. Research grants are typically awarded to projects that have shown some advancement to the initial proof of concept. A smaller amount of PHF funding is for equipment. Equipment that benefits the Oklahoma research community across multiple institutions is of high interest to PHF.

Founded in 1985 with the vision of creating a premier medical center in Oklahoma City, the PHF has invested over \$118 million in medical education and research in Oklahoma. This investment has led to medical breakthroughs which touch the lives of individuals and families in communities across the state and nation. It has also brought exciting economic opportunities by positioning Oklahoma at the forefront of genetic research and biotechnology. The purpose of the foundation is to provide resources and to encourage the development of medical education and research programs, conducted primarily in Oklahoma. The Foundation concentrates its support in these areas:

- **MEDICAL RESEARCH**
- **MEDICAL EDUCATION**
- **COMMUNITY HEALTH PROGRAMS**

This forum is intended to acquaint OSU faculty researchers with PHF, and with recent changes in PHF's funding strategies that make them all the more interested in relevant work at OSU.
